

WRITING SQL SUBQUERIES

Subquery

- A query within a query.
- Used when the analysis you can't retrieve and mold the data how you'd like in a single step.
- Subqueries combine multiple SQL actions together.

Types of Subqueries

- There aren't any official names for each type, so you may hear some conflicting things out in the real world.
- The **first** allows us to use the results of one query as a table for the outer query.
- The **second** allows us to filter the results of one query by the results of another using the IN operator.
- The **third** uses a comparison operator.
